

PDF3D Sample Model

The view on the preceding page is a 3D view-port containing an interactive 3D geometric model. By placing your mouse in the view, a toolbar appears above the view-port allowing configuration options to be selected. By using the left-mouse button, full 3D rotation is available. By using the right-mouse button and moving the mouse up and down in the view-port, the model will zoom larger or smaller. By holding the control button at the same time as the left-mouse button, pan or position adjustment can be made for up, down, left and right directions.

The model was produced using PDF3D SDK software toolkit from Visual Technology Services Ltd. Other sample models, documentation and full product information on PDF3D can be found on <http://www.pdf3d.co.uk>
